

Operating Systems Lab

Threads

Instructor: M. Ahsan

Task-1:

Write a program using Threads to perform Array addition. You have to create threads equal to the number of elements in array each thread should perform single element addition of two arrays in parallel.

Task-2:

Take input the height and width of rectangle and find its area and perimeter($2*L + 2*W$) using multiple threads. Print thread id of multiple thread using function. Adjust the output in specified sequence using join function.
