OS LAB
Assignment # 1

1) Write a shell script to create a file with extension .c

2) Copy contents(c code) from another file to this file.

3) Now use if statement to ask user if user enter 1 just compile it. If user enters 2 compile it and run it. If user enters 3 just print the contents of the original file. Otherwise print the contents of the current directory.

4) Perform the same task using switch inside a function.
